Education

Northeastern University

MS in Data Science

Boston, MA

Expected August 2026

Rutgers University

BS in Finance, Business Analytics/Information Technology

New Brunswick, NJ

May 2024

Research Experience

Machine Learning Researcher

Massachusetts Institute of Technology

January 2026 – June 2026

Cambridge, MA

- Benchmarked 4 VLMs across 300+ origami models using IoU and CLIP similarity, surfacing spatial reasoning patterns
- Achieved query efficiency scores of 0.85–0.87 by fine-tuning constraint thresholds on model outputs

Graduate Research Assistant

Northeastern University

January 2025 – May 2026

Boston, MA

- Engineered Python pipelines for HTML document parsing and CSV generation, reduced prep time by 70%
- Developed an AI powered research dashboard using Python and Claude, improved research accessibility by 40%
- Standardized metadata tagging and coded qualitative text in NVivo, enabling scalable text analysis across 3+ semesters

Publications

OrigamiBench: An Interactive Environment to Synthesize Flat-Foldable Origamis

June 2026

Multimodal Algorithmic Reasoning Workshop, CVPR 2026 (Accepted)

Denver, CO

Agarwal, N., Wu, Y., Jian, Y., Peng, Y., Ding, Y., **Mansoor, N.**, Hu, Y., Li, M., Dai, W., Sansone, E.

Professional Experience

AI Engineer Intern

EisnerAmper

June 2026 - Present

Iselin, NJ

- Building a pipeline tracking AI usage across the firm via the Anthropic and OpenAI APIs, covering 2,400 employees
- Developing a time-series forecasting model to project \$1.7M in year-end AI spend, correcting an initial linear model that failed to capture adoption saturation
- Implementing a conversational agent that answers usage/cost questions via natural language by querying a Power BI semantic model hosted on Azure using DAX queries

Data Science Intern

Defense Industrial Base Institute at Northeastern University

October 2025 – May 2026

Boston, MA

- Built an ingestion pipeline to pull DoD contract data from USASpending.gov and geocode vendor locations
- Engineered a Neo4j knowledge graph connecting vendors, contracts, and geographies via UEI/CAGE identifiers
- Transformed 120+ MILCON and OSD PDFs into structured datasets via Python and SQL, cut manual review by 60%.

Data Science Intern

Beats Electronics

November 2024 - April 2025

Remote

- Trained a Random Forest model on marketing spend and 1,000 surveys, achieved F1-score of 0.84 for audience targeting
- Developed a TF-IDF NLP sentiment pipeline on 5,000 reviews, identifying customer satisfaction drivers
- Integrated ML models, survey analytics, and NLP insights into a Streamlit dashboard for customer trend analysis

Projects

Easy Code | *Python, Qdrant, Neo4j, AST, RAG* | GitHub

June 2026 - Present

- Engineering a hybrid code retrieval system that parses GitHub repositories with AST and indexes code in Qdrant for semantic search
- Building a Neo4j knowledge graph linking files, classes, functions, methods and imports to map codebase structure
- Developing REST API combining vector and graph search to return relevant code with file and line references

Reverse Turing Test | *Python, BERT, OpenCV, HuggingFace, Flask* | Github

February 2026 – May 2026

- Designed a 3-classifier AI-authorship detection framework (BERT: 99.8%, stylometric: 89.3%, OpenCV: 86.6%) on 168k samples from the HC3 dataset
- Achieved 94.2% accuracy by combining all three classifiers via majority vote, identified cross-model detection tradeoffs
- Deployed end-to-end via a web-app for real-time inference and side-by-side comparison of all three classifiers

Technical Skills

Languages: Python, SQL, R

Machine Learning/NLP: scikit-learn, PyTorch, Hugging Face, BERT, CLIP, OpenCV

Data/Tools: Pandas, NumPy, SQLite, Neo4j, Docker, Git, Streamlit, Flask, Azure
